

HyFlex

Hybrid + Flexible

Compulsory Attendance:

Only students facing covid-19 restrictions can request to attend remote classes instead of in-person classes, as assigned to them in their LMS. Requests will be processed on a case-by-case basis and supporting documentation will be required.

Rotation:

1/2 of in-person classes, remaining 1/2 of remote classes.

1/2 of remote classes

1/2 of in-person classes

Timing:

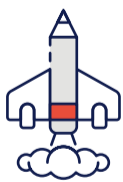

Students who are not facing covid-19 restrictions, will have to be in the Swiss Time Zone as courses will be given live.

Engagement:

Professors will interact and engage with both in-person and remote groups at the same time. All students will be able to start discussions with their professors and classmates.

The HyFlex (Hybrid + Flexible) learning model of on site and remote teaching allows students increased flexibility in their studies, while maintaining the EHL campus experience and interactions.

5 benefits of the HyFlex learning model

1. Flexibility:

Students have access to the best of both worlds to support individual learning styles.

2. Academic continuity:

Increased independence from the evolution of the pandemic and the sanitary measures imposed by the Swiss competent authorities.

3. Learn at your pace:

All classes will be filmed and it will be possible to re-watch them. Ability to listen to instructions multiple times, stop, pause and rewind.

4. Interactions:

Digital content can be more dynamic than traditional textbooks and thus foster interaction during classes.

5. Real-life career preparation:

Staying in touch via email and project management software, managing time, working remotely with a team and completing projects on a deadline are all skills that translate directly to the workforce.
